

Maintain-It-All™

PROGRAMMABLE CHEMICAL METERING PUMP

INSTRUCTIONAL DVD FOR EASY INSTALLATION

A DVD owner's manual is included with each Maintain-It-All Pump. This DVD walks the user through the installation process and provides simple training tips and operating instructions.

- DVD is less than 15 minutes long and works on all DVD players.
- Perfect for training maintenance staff on proper usage of the system.
- Explains the features and benefits of the Maintain-It-All System compared to other chemical metering pumps.
- Enforces the importance of handling chemicals safely.
- Educates maintenance staff on the concept of preventative maintenance and how proper chemical usage can actually save time and money.

QUICK PROGRAMMING INSTRUCTIONS:

Printed instructions are included with each unit and they are also provided on the DVD, which is also included with each unit. Below are the steps broken down to their simplest form:

- Press and hold the Program button for 8 seconds. The screen will flash and the colon will stop blinking to indicate that you have entered the Program mode.
- Release the Program button. The screen will continue to display the current day and time. Use the Hours button and the Minutes button to set the clock. A "P" will appear to indicate PM settings. Set the current time of day.
- Use the Day button to set the day of the week. 1 is Monday, 2 is Tuesday, etc.
- Press the Event button once and the screen will display E:01 to indicate that you are entering Event 1. There are 24 total events, but you'll probably only need to set one for most applications.
- Press the Event button again and the screen will display the time of day that the event is programmed to occur. Use the Hours button and the Minutes button to set the time you want the event to start.
- Press the Days button until the display shows the day or combination of days that you'd like the pump to dispense chemical. If you want the pump to turn on only on Monday-Friday then press the Days button until the display shows "1 2 3 4 5" highlighted. If you want the pump to turn on every day of the week then press the Days button until the display shows "1 2 3 4 5 6 7" highlighted.
- Press the Event button again and the screen will display the duration of the event and MIN:SEC will appear. Use the Minutes button and the Seconds button to program the duration of the event. In order to pump in 30 ounces of 8-Alive, you'll need to enter a time of 6:00 so that the pump will run for 6 minutes. In 6 minutes the pump will deliver 30 ounces because it operates at 5 ounces per minute. For thicker products it may be necessary to increase the duration of the pump because they may pump slower. For example, LBE pumps at about 4 ounces per minute so when using that product you'll want to increase the time to 7:12.
- Press the Program button to leave Program mode. Now the pump is in Run mode and ready to go.
